Employee Signup: invitation link/code can be reused after it has already been used to create an account

To Do 1

Description • Unsaved changes

Description

While testing OBY-9 (Employee Signup), I ran the test case for OBY-19 (Reused Invite). The acceptance criteria say an invite can only be used once. In my test, after I had already used an invitation link/code to create an account, I opened the same link/code again and [the system still let me sign up / no error was shown]. This means one invite can create more than one employee account, which goes against the acceptance criteria and takes control away from HR.

Preconditions

1. An invitation link/code was generated for [test email].
2. The invite had not expired.
3. I had already used it once to create an account successfully.

Steps to reproduce

1. Generate an invitation for [test email].
2. Open the invitation link (or enter the company code) on the Signup page.
3. Complete signup with a valid email and a password that meets the password policy.
4. [Verify the email if required.]
5. Log out and open the **same** invitation link/code again.

Story point estimate

Reporter

6. Fill in the signup form again using [the same email / a different email].

Expected result

The system should reject the second attempt and show a clear message such as "This invitation has already been used. Please contact HR." No new account should be created.

Actual result

The signup form loaded normally and I was able to create a second account. No error message was displayed.

Impact

- I was able to create multiple accounts from one invite, so access to HR records is not properly controlled.
- Anyone who gets hold of a used link could register as the invited employee.
- It fails the acceptance criterion "An invite can only be used once."

Frequency: [Always, 3 out of 3 attempts / Intermittent]

Suggested fix

I recommend marking the invite as "used" in the backend as soon as the account is created, and checking the invite status on the server for every signup request, not just in the UI.

Retest criteria

- A used invite is rejected on any later attempt with a clear error message.
- A new invite from HR still works.
- I will also regression-test OBY-16 (valid invite), OBY-17 (invalid company code) and OBY-18 (expired invite).

Note: The parent story OBY-9 is currently marked "Failed" and its due date (15 Oct 2026) has passed, so I'd like this to be prioritised.
